Vana Pleated Filters

Constructed from a single sheet of polyester/polypropylene media, this cost-effective prefilter is capable of reducing dirt, sand, sediment, silt, rust, scale and other particulates from incoming water supplies.

The single sheet technology used in the construction means that the large surface area is able to deliver high-flow rates, maintain excellent dirt-holding levels and deliver extremely low-pressure drops across its range.

Cartridge integrity comes in the form of its bonded vinyl plastisol end-caps, fusing the pleat pack around its tough inner polypropylene core.

Designed to fit a wide range of industry standard housings in 4 7/8" to 20" configurations (Larger sizes available on demand), with large diameter options, the Pleated filter is the ideal choice for many market applications in either pre- or final stage filtration.

TECHNICAL DATA

- Length/Size: 5"-10"-20" / Jumbo
 - Filtering Method: Pleated Filtration
 - Micron Rating: 0,5-50 micron
 - Max. Pressure: 4 bar (DP)
 - Max. Temperature: 37,8 °C (Operating temp.)

 - Core: Polypropylene (PP)
 - Media: Polyester, Polypropylene (PP)
 - Endcap: PU, Plastisol
- Dimensions:**
- OD (5"-10"): 68mm
 - ID (5"-10"): 28mm

 - OD (10" J-20" J): 115mm
 - ID (10" J-20" J): 28mm

 - 5" Length: 125mm
 - 10" Length: 254mm
 - 20" Length: 508mm

FEATURES

- Pleated design increases surface area and contaminant removal
- Longer filtration runs for fewer change-out and less maintenance
- Low pressure drop
- Designed for general water filtration purposes
