About

The outdoor flow meter uses thermal mass technology which is independent of pressure and temperature change. With no moving parts, the flow meter has a stable signal, high reliability and long-term measurement accuracy.

The streamlined sensor tip ensures minimal impact on gas flow while maintaining accuracy over a wide flow range.

Innovative intelligent diagnostic technology can sense contamination of the sensor in real time and protect the sensor from overheating and damage.

The flow meter has digital signal processing, replacing the traditional analog bridge design. This makes the flow meter more accurate and has a wider range (range ratio of 1:2500).

The highly durable IP67 rated, powder-coated Aluminium housing ensured the sensor can withstand the harshest environments.
